Date: Thursday, December 11, 2014 2:30:12 PM

Jhana,

Follow up air monitoring was conducted today on the first floor of the Lannate Unit using an UltraRAE 3000. The doors were open leading into the building and the sump area as well as the small room were cordoned off with caution tape.

Readings were non-detect for methyl mercaptan in the breathing zone. Detections ranged from 0.3 ppm to 0.4 ppm in the trench at the south side of the sump. Detections ranged from 1.6 ppm to 9.6 ppm in the trench on the north side of the sump. The small room on the northwest corner of the first floor had detections up to 0.3 ppm in the corner near the 55 gallon drum.

Please let me know if you need anything further.

Take care,
Rebecca
